

Gregory Leandro Salazar Domínguez

Quito, Ecuador • [linkedin.com/in/gregory-sd](https://www.linkedin.com/in/gregory-sd) • +593 99 122 5178 • gregory.sd.17@gmail.com

4+ years developing collaborative projects. Specialized in full stack development, databases, and computer vision AI. Led a 4-developer team using SCRUM framework, delivering a complete personal financial system in 4 months. Optimized AI detection model, increasing accuracy from 55% to 88% and reducing inference time from 10s to 3s using CUDA and OpenCV.

FEATURED PROJECTS

Quito United Observatory – Road Safety Data Observatory Proposal

Project & Business Analyst

Quito, Ecuador

February 2026 – June 2026

- Authored the business case, defining ROI and a plan to cut Quito's estimated 40% crash underreporting to below 5% within 10 months.
- Defined the Project Charter's objectives, scope, and a 5-milestone roadmap across a 12-month implementation timeline.
- Designed 5 KPIs measuring data quality, scope, and public-portal adoption to track observatory performance.
- Designed the observatory's data architecture, mapping data flow from 4 external sources (AMT, MSP, ECU 911, MovilízateUIO) through 3 internal units to a public dashboard.
- Co-conducted stakeholder interviews (Bloomberg Philanthropies, Asociación de Peatones de Quito, MovilízateUIO, Sustainable Mobility Laboratory Director) to assess the current state of road safety globally and in Quito.

BiblioTec - Accessible Digital Library

Web Accessibility Developer

Quito, Ecuador

June 2026 – July 2026

- Built Book Detail page using **HTML5**, **CSS**, **JavaScript**, **Node.js**, **NPM**, and **Tailwind CSS v4**, achieving WCAG 2.2 AA conformance with 0 accessibility errors detected by WAVE and verified through manual testing.
- Applied semantic HTML, and targeted WAI-ARIA attributes to ensure all content, including decorative icons and external PDF links, was correctly interpreted by screen readers.

Elderly Care - Telemedicine Prototype for Older Adults

UX/UI Figma Designer & Usability Evaluator

Quito, Ecuador

May 2026 – July 2026

- Identified the caregiver, not the patient, as the real end-user through contextual observation and workshops with older adults and caregivers at a Quito geriatric center, redefining the design direction.
- Designed 4 core screens in **Figma**: patient detail, triage history, vital signs entry (caregiver), and notification panel (medic).
- Reduced task completion time and eliminated navigation errors detected during usability tests across iterative versions, measured with real caregivers and medics.

Deuna challenge - Predictive Merchant Churn & Retention System

Python Data Developer / Analytics Engineer

Quito, Ecuador

Abril 2026

- Built a real-time **Python** and **Streamlit** dashboard to detect merchant churn risk, converting transactional and support data into interactive risk maps and visual insights.
- Engineered a weighted evaluation engine that analyzes inactivity, account balances, and unresolved tickets to pinpoint and rank key risk factors for each business.

- Automated tailored action plans based on risk tiers (High, Medium, Low) to streamline decision-making and proactively prevent customer loss.

Notable - Collaborative Digital Library

Full Stack Developer

Quito, Ecuador

May 2026 – July 2026

- Developed 2 core peer-interaction modules using **Python**: Utility Voting and Commenting System, within a **Django** architecture and a **SQLite** DataBase to evaluate and rank student academic material.
- Eliminated self-voting security vulnerabilities by encapsulating validation logic, guaranteeing business rule enforcement across **ORM**, admin panel, and scripts.
- Refactored multi-level comment thread architecture into the model persistence layer, automatically flattening deep response hierarchies.

Gregory's Kitchen - Recipe Management Web Platform

Full Stack Developer

Quito, Ecuador

October 2025 – January 2026

- Generated 9 detailed use cases with 100% stakeholder approval using **UML** diagrams, progressing to robustness-communication and sequence diagrams for technical design.
- Eliminated 95% of ingredient data redundancy through optimized associative table design, reducing **MySQL** database query time by 35% through catalog optimization.
- Implemented **MVC** architecture with **DAO** pattern for 4 entities, developing full **CRUD** operations for Recipes and Ingredients using **Java JPA (EclipseLink)** and **Jakarta EE Servlets**.
- Deployed functional web application on **Apache Tomcat 10** with **HTML5**, **CSS3**, and **JSP frontend**, integrating **RESTful endpoints** for asynchronous data operations.

EconoMe - Personal Financial Management System

Technical Lead

Quito, Ecuador

October 2025 – January 2026

- Led a 4-developer team applying **SCRUM** framework in **Azure DevOps** with **Git**, managing 4 two-week sprints, sprint planning, product backlog management, sprint reviews, and retrospectives.
- Delivered first product release meeting 100% of planned deadlines using **Maven** build automation and Azure **CI/CD pipeline**, implementing 8 functional features: accounts, income, expenses, debts, loan, income/expenses template, reminders, and financial summaries with **PostgreSQL** persistence.
- Developed business logic using **TDD**, and implemented user interface for financial reports module.

BLACKJACK AI - AI-Powered Card Detection System

AI and Backend Developer

Quito, Ecuador

April 2025 – July 2025

- Increased detection accuracy by 60% (from 55% to 88%) implementing a computer vision pipeline with **YOLOv8** deep learning model, **PyTorch** framework, and **NumPy** array processing, achieving competitive real-time detection metrics.
- Reduced inference time by 70% (from 10s to 3s) through **CUDA GPU** optimization with **FP16** precision, adaptive preprocessing with **OpenCV** (bilateral filter, CLAHE, Canny edge detection), and duplicate elimination using **IoU** algorithm.
- Achieved 40% improvement in edge detection applying adaptive ROI extraction with intelligent padding using computer vision techniques and **TensorFlow/Keras** neural network architectures.
- Architected an asynchronous RESTful API with **FastAPI** framework, processing images through **Pydantic**-validated endpoints, achieving full integration between **JavaScript** frontend and **Python** backend.

FITEC - Distributed Management System for Gym Network

Full Stack Developer

Quito, Ecuador

April 2025 – August 2025

- Designed distributed **SQL Server** database architecture across 2 geographic nodes, applying horizontal fragmentation per branch with CHECK constraints, ensuring data isolation and privilege enforcement per location.
- Implemented 4 updatable partitioned views, enabling 100% transparent cross-node CRUD operations without modifying application logic.
- Configured bidirectional replication for SUBSCRIPTION catalog with automatic real-time synchronization between nodes, ensured 99.9% ACID consistency through distributed transactions using 2PC protocol.
- Developed 2 complete modules (Supplements + Subscriptions) applying DAO pattern.

CineMax - Cinema Management System

Full Stack Developer

Quito, Ecuador

April 2025 – August 2025

- Collaboratively architected **Java** application applying SOLID principles and design patterns, managing complex relationships between Movies, Theaters, Tickets, Employees, and Reports entities.
- Designed scalable sales architecture enabling future services expansion (food sales, merchandising).

KNOCKOUT GAME - 2D Fighting Game

Game Developer

Quito, Ecuador

October 2024 – March 2025

- Developed browser-based fighting game using **Unity** Engine and **C#** scripting, implementing 2 of 5 fighters (40% of roster) with unique combat mechanics.
- Implemented 2 of 5 interactive scenarios (40% of game environments).
- Achieved 75% user satisfaction across surveys with over 30 users for gameplay and visual design.

WORK EXPERIENCE

Viveres P&P

Customer Service

Quito, Ecuador

January 2021 – October 2022

- Provided customer service for essential product sales. Developed effective communication with customers, agile problem-solving under pressure, and team collaboration.

EDUCATION

ESCUELA POLITÉCNICA NACIONAL

Software Engineering

Quito, Ecuador

November 2022 - Present

ADDITIONAL SKILLS

- Self-directed learning, technical leadership, conflict resolution, teamwork, effective communication, adaptability.
- Spanish (Native). English (Intermediate)
